## DETAILED ACTION

### *Allowable Subject Matter*

The following is an examiner's statement of reasons for allowance: With respect to claims 1, 13, and 16, the Prior Art does not teach a precision processing apparatus for processing an object at accurately controlled positions, the apparatus comprising a working platform for supporting the object to be processed; a support structure for providing support to the working platform, the working platform being movable relative to the support structure along a path, the support structure containing a soft magnetic element with a surface that extends in parallel with said path; an suspension actuator part attached to the working platform, the suspension actuator part comprising a soft magnetic core with poles facing the surface of the soft magnetic element and a winding for application of a current to generate a magnetic field that runs through the core via the poles and returns via the soft magnetic element; a position reference element, mechanically decoupled from the soft magnetic element; a sensor for producing a sensing result indicative of a measured position of the suspension actuator part relative to the position reference element; a control circuit comprising an outer control circuit and an inner control circuit, the outer control circuit receiving said sensing result and determining force set point information to regulate the measured position of the actuator part to a required value, the inner control circuit receiving the force set point information and controlling the current to realize a force between the actuator part and the support structure according to the force set point information. Claims 1-21 are allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
